PROFILE

Dedicated and highly skilled VoIP Architect and AI Solutions Engineer with extensive experience designing and implementing next-generation communication ecosystems. Combines deep expertise in engineering robust, scalable, and secure VoIP infrastructures with advanced capabilities in AI/LLM development, SQL database architecture, and full-stack web application development. Proven success in architecting fully autonomous AI-powered call centers and virtual receptionists that operate end-to-end without human intervention, leveraging custom-trained language models, real-time voice AI pipelines, and intelligent workflow automation. Adept at translating business requirements into scalable technical architectures, designing data-driven web platforms, and optimizing SQL databases to support AI-driven communication and enterprise applications.

Recognized for pioneering voice-AI integrations, most notably the development of the **216-KILLIAN** mnemonic phone system—a personal AI assistant activated via direct voice call that accepts natural language commands, executes automated tasks, and delivers expert consultations powered by self-trained, personalized LLM models. Proven track record of leading cross-functional teams, conducting technical feasibility assessments, and successfully delivering complex, globally deployed VoIP and AI integration projects that align with strategic organizational objectives. Passionate about converging traditional telephony with cutting-edge artificial intelligence to deliver seamless, intelligent, and fully automated communication experiences.

EMPLOYMENT HISTORY

VoIP & Website Developer (Front end, Back end), Self Employed

Jan 2011 — Present

- Developed personal web pages (landing pages, full desktop and mobile versions websites) using PHP, Python, HTML, CSS, as well as integrating Asterisk for business.
- Created a Telegram Bot for selling Premium SMS numbers, High-rate Premium numbers, regular global numbers to receive SMS or calls to register in social networks.
- Designed and built call centers for businesses with remote access for representatives to answer calls remotely.
- Created IVRs, queues, music on hold, call transferring, and call recording.

- Developed personal web pages with admin dashboards for managers to remotely get access and check representatives status (online, on phone conversations, offline etc.)
- Worked with MySQL to create databases and securely store customer information.

Junior Python/ API/ VoIP Developer, NAKA Mobile Sirnach, Switzerland

Jan 2017 — Apr 2020

- Utilized API to create a bot to communicate with customers through Telegram
- Used Naka Mobile API and Telegram API to establish calls between SIM card users and application users.
- Programmed global roaming-free SIM cards with different profiles for global use without the need for a local Sim card
- Monitored voice and SMS traffic for network stability
- Performed maintenance and upgrades to servers, as well as regularly adding new features for Telegram users as free app to contact to sim card users around the world.
- Received/Sent calls and SMS messages through Telegram bot.
- Worked with HLR lookup and Premium numbers

Account Executive, Leader Cosmetics / Leader Perfume

Kharkiv, Ukraine

Aug 2010 — Feb 2012

- Developed a user-friendly website that boosted brand awareness
- Assisted in negotiation of distribution contracts for major cosmetic companies
- Oversaw operations at several locations including Barabashovo Market - one of the largest markets in all of Europe.
- Developed a budget and managed store expenses to ensure profitability

Regional Manager, Supermarket Nash Kharkiv, Ukraine

Jan 2008 — Aug 2010

- Developed and maintained a regional budget that allowed for the successful expansion of operations into 5 new locations
- Analyzed regional sales data to identify key trends and insights that drove decision-making and strategic planning
- Analyzed market trends and competitor strategies to inform decisions and optimize marketing efforts

Regional Manager, MD Retail Kharkiv, Ukraine

Dec 2005 — Dec 2007

- Established effective relationships with regional vendors to reduce costs and improve product availability
- Utilized CRM software to track customer data, interactions, and activity, resulting in improved customer service
- Analyzed customer data to uncover opportunities for upselling and cross-selling products
- Maximized customer satisfaction through regular follow-up and proactive problem resolution

Junior Developer, Ukrtelecom Kharkiv, Ukraine

Feb 2003 — Nov 2005

- Designed, engineered, and maintained an Asterisk based call center system
- Created a custom logging system to capture and store system data for debugging and analytics
- Implemented a microservices architecture that improved system modularity and reduced dependencies between components
- Implemented automated monitoring and alerting to quickly identify and resolve system issues
